

STABLEMATE BOXFRESH

PROFESSIONAL CLEANING PRODUCT FOR THE EQUINE INDUSTRY

A pine based multipurpose detergent concentrate with excellent cleaning properties that cleans and deodorises leaving a fresh pine aroma after use.

Suitable for use on most hard surfaces in stables, horseboxes, stall mats, floors, walls, doors, worktops, ceramics and paintwork.

BOXFRESH is packed in 1 litre bottles which are easy to handle and fitted with a precision dosing system that allows the user to dispense 20 ml, 40 ml or 60 ml doses of product to control usage without the need for expensive dosing equipment. With accurate dosing assured it is a straight forward process to produce 5, 10 and 15 litres of cleaning solution to clean large areas.

Instructions for use

Ensure the cap is tightly closed and follow these instructions:

Note when adjusting the dose by tipping the bottle in Step 2 it is the guide line on the left that you use so that when upright you have the correct dose which can then be checked against the level line on the right side. In the case of the 20 ml dose the left side guide line is right at the bottom of the chamber.

A video showing this process can be viewed on line <https://vimeo.com/74440526>

Dosing rates:

Add 20 ml to 10 litres of water* for general maintenance and hard surface cleaning.

Add 40ml or 60 ml to 10 litres of water* for heavily soiled surfaces.

Add 60ml to 10 litres or 120ml to 20 litres for use via a high-pressure washer.

* The use of warm water, if available, will aid the cleaning process.

The cleaning process should commence with the removal of any bedding or gross debris from the area to be cleaned.

Manual cleaning – Mopping / Brush

Make up a working solution in a suitable bucket.

Apply the working solution liberally to the surface.

Allow a short dwell time of a minute or two to allow the solution to soften the soils.

Then agitate the surface with a stiff brush to aid loosening.

Finally rinse with clean water via swilling, hose or pressure washer.

Via high pressure washing equipment

Produce a working solution and add to the chemical tank on the equipment or in a suitable container if the equipment is fitted with a chemical pick up pipe.

Set the dosage rate on the equipment to the midpoint which will allow increasing or reducing if required.

Apply the chemical via low pressure.

Allow a short dwell time of a minute or two to allow the solution to soften the soils.

Then rinse at high pressure.

Note if the equipment has a hot mode this will aid the cleaning process.

After cleaning should disinfection be required then use **STABLEMATE DIS-IN-FECT**.
